Build something great™

Echostop

Excellent Sound Reduction

An acoustic and decorative solution, BORAL Echostop is a perforated gypsum board designed for systems requiring both superior acoustic and aesthetic qualities. Its superior appearance is an additional benefit for schools, large open area ceilings in hotels, conference and concert halls, and offices where the 'look' is as important as acoustic performance.

BORAL Echostop

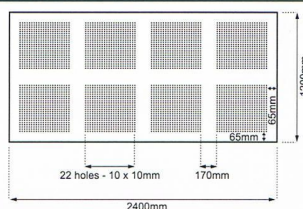

BORAL Echostop is specially developed to meet both noise reduction and quality design specifications for commercial buildings. BORAL Echostop is available in a number of different designs, with Noise Reduction Coefficient (NRC) performance ranging from 0.55 - 0.8
